Lab 4

Designing Consistently Using Auto Layout, Components

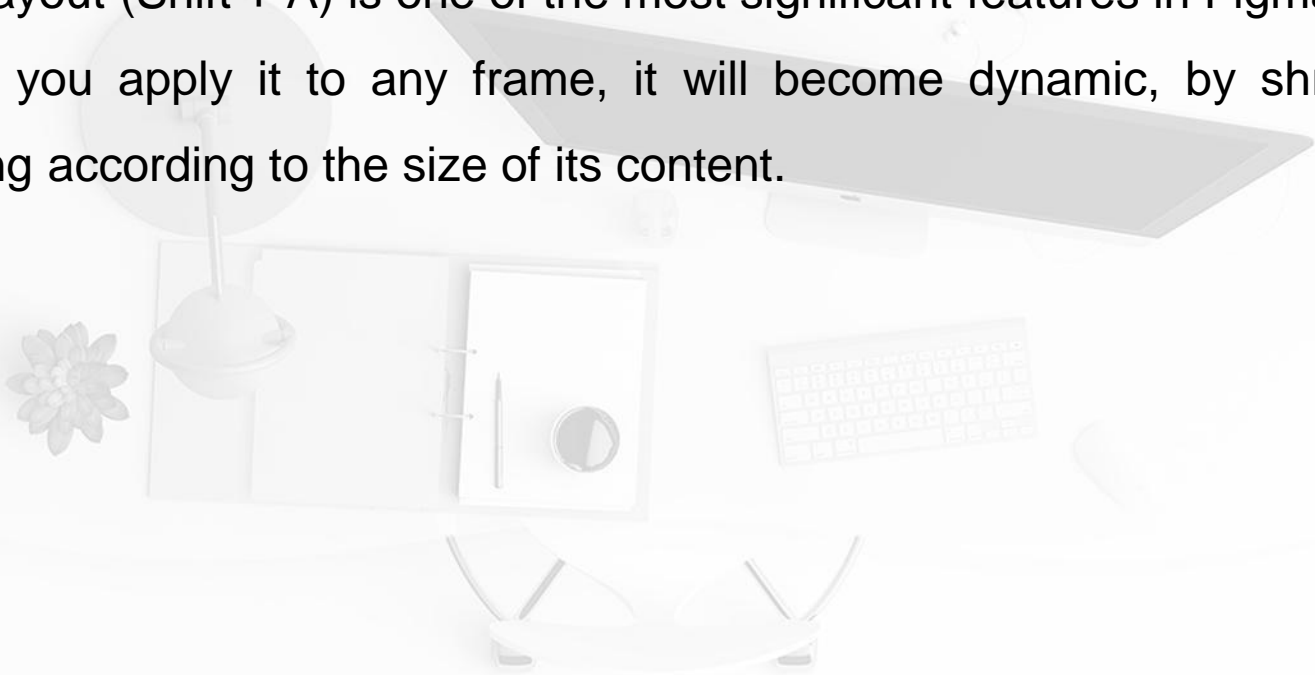

Project Description

A client needs a platform for managing hotel reservations, including booking, cancellations, payments, and automated confirmation emails.

1. Auto layout

- Auto layout (Shift + A) is one of the most significant features in Figma.
- When you apply it to any frame, it will become dynamic, by shrinking or growing according to the size of its content.

Assignment 1

Use auto layout to create a login form section (username, password, forgot password).

2. What are components?

Components (Ctrl + Alt + K) in Figma are powerful tools that allow you to reuse design elements across your project efficiently

Assignment 2

Create components and apply them to the following pages:

- Home page
- Room Listing / Search Results Page

Assignment 3

Design the Room Detail page.
